SUMMARY

AI/ML and Full-Stack Engineer focused on Generative AI, LLM integration, and reinforcement learning environments. Hackathon winner, Polaris Fellowship 2026 Round 2 shortlist, and creator of an open-source local-first AI assistant. Certified B2 English (British Council).

EXPERIENCE

Digital South Trust | AI/Blockchain Engineer, Project & Internship Manager **Oct 2025 – Oct 2026**
Bengaluru, India (Remote)

- Appointed Internship Manager in June 2026, onboarding and mentoring 25+ Vel Tech University students through structured code reviews and regular feedback sessions.
- Lead end-to-end delivery of 5+ production projects across Generative AI, Ethereum smart contracts, and full-stack web applications, holding on-schedule delivery across all engagements.
- Integrate LLM features into production platforms via Gemini and Nvidia APIs, designing prompt pipelines and evaluation criteria for consistent output quality.
- Present sprint demos and translate business requirements into technical specifications for non-technical stakeholders as sole Project Manager.
- Connect Web2 and Web3 systems using Ethers.js, IPFS, and ERC-20/ERC-721 standards, adding on-chain functionality without frontend rewrites.
- Run the DevOps lifecycle, VPS provisioning, Docker containerisation, and CI/CD pipelines, sustaining post-deployment uptime on Coolify and Render.

Freelance | AI/ML, Full-Stack & Web3 Developer | Remote **Jun 2024 – Present**

- Delivered 10+ client projects independently, owning the cycle from requirement gathering to deployment and handover.
- Architected AI integrations and Web3 solutions for client platforms, spanning smart contracts and LLM-powered features.
- Developed responsive web and Android applications using React.js, Next.js, React Native, Node.js, and MongoDB.
- Led scoping calls in English and authored written specifications, reducing post-launch change requests.
- Managed cloud hosting, domain configuration, and uptime across Vercel, Render, and Netlify.
- Handle post-launch maintenance and feature iterations directly with clients as the sole point of contact.

PROJECTS

SandBench - Secure AI Benchmarking & RL Environment | 1st Place Winner **Jun 2026**
Next.js, Python, Docker, Redis | Age of AGI Hackathon | [GitHub](#) | [Live](#)

- Won 1st place by creating a secure code benchmarking platform, AI model evaluation framework, and reinforcement learning environment for automated code repair.
- Engineered a sandboxed Docker execution layer isolating untrusted model-generated code, preventing host compromise across concurrent benchmark runs.
- Designed a deterministic scoring pipeline producing reproducible, directly comparable results across evaluated models.

Kelevance - AI-Powered Financial Analysis Platform **Nov 2024 – Jan 2025**
MERN, MongoDB, FastAPI, Gemini 1.5 API, Pandas, JWT | [GitHub](#) | [Live](#)

- Developed an AI analytics platform using Gemini 1.5 to forecast revenue, expenses, profit/loss, and churn from raw Excel, CSV, and JSON uploads, cutting manual analysis time by 70%.
- Architected a decoupled FastAPI inference service with multi-tenancy, four-tier role-based access control, 2FA, and AES-256 encryption.

Veeshree - Local-First AI Context Persistence Layer **Nov 2024 – Dec 2024**
Node.js, TypeScript, MiniSearch, Git, npm | [npm Package](#) | [Live](#)

- Developed and published an open-source, model-independent context engine on npm, enabling seamless context sharing across Claude, Gemini, OpenAI, and local Ollama models.
- Built a token-budgeting pipeline enforcing a strict 2,000 token max ceiling per injection.
- Implemented a SHA-256 code drift detection guard tracking source file checksums linked to Architectural Decision Records (ADRs) to flag undocumented code changes.

EDUCATION

Alliance University (Kalvium Program) - Bengaluru, India

2024 – 2028

B.Tech, Computer Science & Engineering | CGPA: 8.65 / 10 (Year 1: 8.7, Year 2: 8.6)

OTHER

- **Technical Skills:** Python, JavaScript, TypeScript, Solidity, Rust, SQL; Generative AI, LLM Integration, Agentic AI, RAG, Prompt Engineering, Reinforcement Learning, Model Finetuning & Serving, AI Evaluation & Benchmarking, Gemini API, OpenAI API, IBM WatsonX; React.js, Next.js, React Native, TailwindCSS; Node.js, Express.js, FastAPI, REST, GraphQL, WebSockets; MongoDB, PostgreSQL, MySQL, Redis, Firebase, Supabase; Ethereum, EVM, Hardhat, Foundry, Ethers.js, OpenZeppelin, IPFS, ERC-20/721/1155; Docker, CI/CD, Vercel, Render, Netlify, Git
- **ML Frameworks (currently learning):** PyTorch, Hugging Face Transformers, scikit-learn, LangChain
- **Certifications:** British Council — Speaking & Core Skills, Level B2 (CEFR); IBM TechXchange WatsonX Hackathon — selected national participant
- **Achievements:** Polaris Fellowship 2026 Round 2 shortlist (top 10 student builders in India); Finalist, Scaler × Meta Hackathon (48-hour RL environment); Finalist, HackHub 25 VIT Chennai (SecureID, NFT-based identity); System Architect, AmarChain Web3 organ donation platform
- **Additional Projects:** ToHappen, MultiChange, CogniForm, ZenPark, SecureID - Gemini, agentic AI, and Web3 applications on GitHub
- **Professional Skills:** Effective Communication, English Proficiency (Spoken & Written), Interpersonal Skills, Client Communication, Team Leadership, Mentoring, Stakeholder Management, Agile, SDLC, Technical Documentation, Cross-Functional Collaboration
- **Languages:** English (Professional Working Proficiency - B2, British Council)
